

In the Library, we have books that means that our Library management system will be managing books.

Adding on the instance variables that the Item class has(**Title, Genre, Number of Items** and **Donor name**), we will need to know when a book was published, by that we will add another instance variable called **Published Year**

Also adding from the Methods in the Item class(Add and Sell), a book can be borrowed from the library so we have **Borrow Method** in Book class.

We are going some functionalities to the **Add Method**:

- We are going to add the published year on the Add method

Test Number	Description	Test Data	Excepted Results	Actual results	Pass/Fail
1.	Testing Init(Title) Positively	Dog	Dog		
2.	Testing Init(Genre) Negatively	Nature document ary	Love feelings		
3.	Testing Init(noitems) Negatively	008	015		
4.	Testing Init (sellingprice) Negatively	500\$	15\$		
5.	Testing Init (noitems) Positively	015	015
