

We are also going to be having Audiobooks in our Library management system so we will be having Audiobook Class in our program.

We will also be inheriting instance variables on from the Item Classs(**Title, Genre, Number of Items** and **Donor name**) and also **Published Year** instance variable from Book Class. Then add another instance variable **Rental Price**.

Another Method that we will add in this class is **Rent Method**,

- Enter the book Title to check if it's there
- If the book is there, we will check the rental price
- Then, the program will remove 1 from the number of items

### Testing

Test Number	Description	Test Data	Excepted Results	Actual results	Pass/Fail
1.	Testing Positively the Init	8	8		
2.	test rent	20 November	25 November		
3.	Testing the number of items ( negatively)	005	002		
4.	testing negatively the Init	ELLA	004		
5.	Test the title Positively	Life and Nature	Life and Nature
