Item class

As this is a Libary Management system, the library will be managing items and to manage them we need information on the items.

Following are **instance variables** that Item Class will be having; **Title** of the Item, **Genre**, **Number of Items** that are in the library, and the **Selling price** of the Item.

Testing table:

Test Number	Description	Test Data	Excepted Results	Actual results	Pass/Fail
1.	Testing if Init(Title) can accept both numbers and words	The 100	Data should be accepted	Data should be accepted	Pass
2.	Testing Init(Genre) positively	Action	Data should be accepted	Data should be accepted	Pass
3.	Testing Init(noitems) negatively	10	Invalid input	Invalid input	Pass
4.	Testing Init (sellingprice) positively	300	Valid input	Valid input	Pass
5.	Testing Init (donorname) Positively	Marry	Valid input	Valid input	Pass
